

FtmPay LITEPAPER

Overview

Reflect tokens have become a popular way to speculate on our favourite tokens and accumulate rewards. The goal of FtmPay is to become the biggest stable coin reflection token on the Fantom Network. Stable coins make an amazing reward because of their price consistency. You don't have to worry about timing an exit on your rewards. Instead, you can sit back, relax and stack USDC. You can then take these USDC rewards and participate in Defi protocols for yield. FTMPay aims to generate massive trading volume and become a leading coin on the Fantom network. With big volume comes big rewards for holders because they will receive reflections on both Buy and Sell transactions of FTMPay. This makes FTMPay an exciting and unique passive income opportunity.

How It Works

Reflection tokens take a portion of every transaction and buy another token, which is distributed to all holders based on their percentage of supply. In our case, USDC will be purchased and distributed as the reward. In addition to the reflection, a small amount of each transaction will be used to grow trading liquidity (more liquidity = less volatility and bigger swaps), pay for additional marketing efforts, and pay the developers/team. We believe rewards should make up the majority of the tax breakdown. This is why we are offering the juiciest reflection rate in the game at 11%. This means on a \$100 buy or sell, 11\$ will be distributed to holders. The more FTMPay you hold, the more rewards you will accumulate as it is based on your percent of the circulating supply.

How To Buy

1. Download Metamask. Make an account and keep your seed phrase somewhere safe and secret (Not on phone or computer file).
2. Fund your Metamask with some \$FTM from a CEX (Binance, Kucoin, Etc.) or directly using Metamask Swap.
3. Connect your Metamask to the Fantom Opera Network. You can do this easily by going to spookyswap.finance and connecting your Metamask wallet.
4. Head to spookyswap.finance and click the swap tab. Now you can purchase \$FtmPay using your \$FTM. Copy and paste the \$FTMPay Contract Address in the bottom half of the trade window. Set your slippage to 20%+ to avoid failed transactions. This high slip accounts for the taxes used for reflections, marketing, etc.
5. Add the \$FTMPay contract address to your Metamask to see your tokens.
6. Add the \$USDC contract address to your Metamask to see your rewards accumulate

Checking Rewards

A dashboard to view and claim rewards will be released shortly after launch. Until then, you can manually update your reward balance by buying, selling, or sending yourself 1 FTMPAY. This interaction will refresh your USDC reward balance.

Tokenomics Overview

11% Reflect USDC

2% Added to Liquidity Pool

1.5% Marketing Wallet

1.5% Dev /Team

Total Tax: 15% Recommended slippage setting for trading: 20%+

The Future

The leading reflect tokens on Avalanche Network have shown just how successful a good printer project can be. Check out \$ETHP to get an idea. This protocols did millions in trading volume producing massive rewards for holders. Our goal is to become the juggernaut reflect project on the Fantom Opera Network. The marketing fund will be used to consistently onboard new users and grow the community with marketing posts, collaborations, and contests. We believe a token is only as good as its community, so our focus for Q1 2022 will be growing our user base and creating a fun and supportive space for them to thrive. As the protocol grows, the marketing wallet will be used to host juicy giveaways further rewarding FTMPay users.
